

COMBINATION RIM SPROCKET

The range of combination rim sprockets from Windsor Forestry Tools represents the latest development in our continual efforts to improve the performance and operating economy of forestry harvesting machines.

Extensive field testing has already proved just how excellent the new rim sprockets perform in all types of difficult condition - at all operating temperatures.

In conjunction with Windsor Forestry Tools harvester chain the combination rim sprockets give you a previously unavailable opportunity to reduce operating costs in combination with low wear and the long life of both rim sprockets and harvester chain.

The new combination rim sprocket is a real money-saver.
